PRACTICAL PLAYBOOK

How to Run a One-Person Real Estate Team with AI

Copy-Paste Prompts, Daily Workflows & Real Examples to Save 10+ Hours Per Week

Ready-to-Use Prompts

5-Minute Workflows

Real Examples

What's Inside

01 **Write Listings That Sell — In Minutes, Not Hours**

Copy-paste prompts, before/after examples, voice training

02 **Automated Follow-Ups That Don't Sound Robotic**

Templates for new leads, post-showing, nurture, post-closing

03 **Market Analysis on Demand**

Neighborhood summaries, comp narratives, buyer briefings

04 **Your AI Toolkit — What to Use and What to Skip**

Honest tool reviews with no BS recommendations

05 **Putting It All Together — Your Daily Workflow**

Morning routine, listing workflow, weekly planning

INTRODUCTION

You're Doing Too Much

Let's be honest. You're drowning.

You're writing listing descriptions at 11 PM. You're forgetting to follow up with leads because you're at three showings. You're Googling neighborhood stats five minutes before a buyer meeting. And every time someone tells you to "build a team," you do the math on salaries and want to cry.

Here's the thing: you don't need a marketing person, a transaction coordinator, and an ISA. You need the right tools doing the right tasks at the right time.

This isn't a tech manual. I'm not going to explain how AI works. I don't care, and neither should you. This is a playbook. Copy-paste prompts. Exact steps. Real examples.

10-15

Hours saved per week

5 min

Per listing description

$0

Cost to start

"By the end, you'll have workflows that save you 10-15 hours per week. That's two showing days. That's your sanity back."

CHAPTER 01

Write Listings That Sell — In Minutes, Not Hours

The Problem

Writing listing descriptions sucks. It takes forever, you end up using the same tired phrases ("pride of ownership," "must see"), and half the time it still sounds like every other listing in the MLS.

You know what makes a good listing. You just don't have two hours to craft it.

The Solution

ChatGPT or Claude can write your first draft in 30 seconds. Then you edit it to sound like you. Total time: **5 minutes instead of 45.**

Here's exactly how.

1 **Open ChatGPT or Claude (Free Version Works)**

Go to chat.openai.com or claude.ai. Both are free. Claude tends to sound a bit more natural, but honestly? Either works fine.

2 **Use This Exact Prompt**

Copy this, fill in your property details, paste it in:

COPY THIS PROMPT

```
Write a compelling listing description for a residential property with these details:

- Property type: [single-family home / condo / townhouse]
- Bedrooms: [number]
- Bathrooms: [number]
- Square footage: [number]
- Lot size: [number or N/A]
- Year built: [year]
- Neighborhood: [name]
- Key features: [updated kitchen, pool, mountain views, etc.]
- Unique selling points: [what makes this special?]
- Ideal buyer: [young family / downsizer / investor / first-time buyer]

Tone: Warm and inviting, but not cheesy. Focus on lifestyle, not just features. Keep it under 200 words. No cliches like "pride of ownership" or "must see."
```

3 **Edit to Sound Like You**

The AI output will be 80% there. You need to add the last 20% — your voice, local knowledge, specific details only you noticed. Read it out loud. Does it sound like something you'd say? If not, tweak it.

Before & After

X BEFORE (11 PM YOU)

"Beautiful 3-bedroom, 2-bathroom home in desirable Maplewood neighborhood. This stunning property features an updated kitchen with granite countertops, spacious living areas, and a large backyard perfect for entertaining. Pride of ownership shows throughout. Must see to appreciate. Won't last long!"

AFTER (AI-ASSISTED, THEN EDITED)

"This Maplewood 3-bed feels bigger than 1,800 square feet has any right to. The kitchen remodel (2022) actually makes sense — tons of counter space, good flow, and the island is perfect for weeknight chaos or weekend hosting. The backyard is the real sell, though. Mature trees, flagstone patio, and enough room for a playset or garden beds. Quiet street, walkable to Maplewood Elementary."

Advanced Move: Train It on Your Voice

Want the AI to write more like you from the start? Copy 2-3 of your best past listings, then use this prompt:

COPY THIS PROMPT

```
I'm going to paste three listing descriptions I've written. Study my writing style, tone, and word choice. Then I'll give you property details and you'll write new listings that match my voice.

Here are my examples:
[paste listing 1]
[paste listing 2]
[paste listing 3]

Got it? Now write a listing for this property: [paste property details]
```

PRO TIP

The output will sound way more like you. It's honestly a little creepy how well this works. Do this once, save yourself time forever.

COMMON MISTAKES

- **Don't just copy-paste.** Buyers can tell. Add your own observations and local knowledge.
- **Don't use the same prompt for every listing.** A luxury condo and a starter home need different tones.
- **Always fact-check.** AI doesn't know your MLS. Double-check square footage, bed/bath count, school districts.

CHAPTER 02

Automated Follow-Ups That Don't Sound Robotic

80%

of deals come from follow-up

2 min

to draft 4 follow-ups

Why Leads Go Cold

You know why. You got busy. You meant to text them. Three weeks went by. Now it's awkward.

Meanwhile, that lead went with another agent who just stayed in touch. It's not that they were better than you. They just didn't forget.

The Fix

AI drafts the messages. You personalize and send. The hard part (structure, tone, content) is done in seconds.

Template 1: New Lead Follow-Up (Day 1)

They filled out a form or called about a listing. You showed them the property. Now what?

COPY THIS PROMPT

```
Write a friendly follow-up text message for a real estate lead I just met. Keep it under 60 words, conversational tone.

Context:
- We [met at the showing / talked on the phone] about [property address]
- They seemed interested in [specific feature they mentioned]
- Next step: [schedule another showing / send more listings / answer their financing question]

Make it warm but not pushy. End with a clear question or action.
```

EXAMPLE OUTPUT

"Hey Sarah! Really enjoyed showing you the Elm Street house this morning. I know you loved that backyard — it's a good one. I found two similar properties that just hit the market if you want me to send them over. Let me know!"

Template 2: Post-Showing Follow-Up (Day 2-3)

They saw the house. Radio silence. You need to nudge without being annoying.

COPY THIS PROMPT

```
Write a casual follow-up text to a buyer who saw a property 2 days ago but hasn't responded.

Details:
- Property: [address]
- What they liked: [specific features]
- Any concerns they mentioned: [price / location / size / etc.]
- Current status: [still available / offer pending / price reduced]

Tone: Friendly check-in, not salesy. Give them an easy out if they're not interested.
```

Template 3: Long-Term Nurture (Monthly)

People who said "we're thinking about buying in 6 months." Stay on their radar without being a pest.

COPY THIS PROMPT

```
Write a friendly check-in message for a real estate lead I haven't talked to in [timeframe].

Context:
- We last spoke about [buying / selling] in [neighborhood / price range]
- Their timeline was [season / timeframe]
- Recent market update: [inventory is up/down, rates changed, new listings in their area]

Tone: Just saying hi, giving useful info, no pressure. Keep it under 80 words.
```

Template 4: Post-Closing Follow-Up

Deal closed. Most agents disappear. Don't be most agents.

COPY THIS PROMPT

```
Write a warm follow-up message to a client whose home purchase just closed [timeframe] ago.

Tone: Genuine, not salesy. Check in on how they're settling in, offer help if they need
contractor recommendations. Keep it personal and under 100 words.
```

THE SYSTEM

Sunday night or Monday morning: Look at your week. Who needs a follow-up? Open ChatGPT, paste 3-4 prompts at once, get all your drafts in two minutes. Personalize and send. Total time: **10 minutes for a week's worth of follow-ups.**

"AI can't build relationships for you. But it can remove the friction of starting the message. The agent who stays in touch wins."

CHAPTER 03

Market Analysis on Demand

The Scenario

You're meeting a seller in 90 minutes. You need to sound like you know everything about their neighborhood — sales trends, buyer demand, what's moving fast, what's sitting.

You could spend an hour pulling comps and Googling. Or you could get AI to draft your talking points in five minutes, then verify the details.

CRITICAL RULE

AI will confidently tell you things that are wrong. It might say "Riverside has a Trader Joe's" when it doesn't. **Always fact-check every claim.** Think of AI as an eager intern who writes fast but doesn't know the market.

Neighborhood Summary for Seller Meetings

COPY THIS PROMPT

```
I'm meeting with a potential seller in [neighborhood name], [city]. Write a 3-paragraph market
summary I can use in my listing presentation.

Include:
- General overview of the neighborhood (demographics, appeal, lifestyle)
- What buyers love about this area
- Current market conditions (you can speak generally - I'll add specific stats)

Tone: Confident and knowledgeable, like I've sold 50 homes here. Keep it under 200 words.
```

Comp Analysis Narrative

Your CMA has the numbers. AI helps you explain what they mean in plain English.

COPY THIS PROMPT

```
Write a short explanation of these comparable sales for a seller. Make it clear and confident.

Comps:
- 421 Maple Ave: 3 bed, 2 bath, 1,750 sq ft, sold for $385,000, 12 days on market
- 89 Oak Street: 3 bed, 2 bath, 1,800 sq ft, sold for $392,000, 8 days on market
- 1534 Birch Lane: 3 bed, 2 bath, 1,725 sq ft, sold for $378,000, 18 days on market

Seller's home: 3 bed, 2 bath, 1,780 sq ft, updated kitchen, good condition

What's the story here? What should we price at and why? Keep it under 150 words.
```

EXAMPLE OUTPUT

"Here's what the market is telling us. Three very similar homes in your neighborhood sold between $378K and $392K in the last two months. The spread tells us that condition and presentation matter — the Oak Street house was move-in ready and got top dollar in just over a week. Your home is right in the sweet spot. Based on these comps, I'd recommend listing between $385K and $390K."

Buyer Neighborhood Briefing

Buyer asks, "What's it like to live in Riverside?" Prep a tight answer:

COPY THIS PROMPT

```
Write a 2-minute neighborhood briefing for a homebuyer considering [neighborhood name].

Cover:
- Vibe and lifestyle (who lives here, what's the feel)
- Amenities (parks, schools, restaurants, shopping)
- Commute and walkability
- Any drawbacks or considerations (be honest)

Tone: Informative but real. I'm their trusted advisor, not a salesperson.
```

THE PROCESS

1. Use AI to draft the narrative
2. Verify every factual claim (schools, businesses, commute times)
3. Add your own observations from actually being there

CHAPTER 04

Your AI Toolkit — What to Use and What to Skip

There are 47,000 "AI tools for real estate" and most of them are garbage. Here's what actually works.

ChatGPT

START HERE

Cost: Free (paid $20/mo is faster)

Best for: Listings, emails, follow-ups, brainstorming

Access: chat.openai.com

If you only use one AI tool, use this.

Claude

GREAT ALTERNATIVE

Cost: Free (paid $20/mo)

Best for: Same as ChatGPT, sounds slightly more natural

Access: claude.ai

Try both, see which one you vibe with.

Your CRM's "AI Features"

IF YOU ALREADY PAY

Follow Up Boss, LionDesk, kvCORE — they all added "AI" recently. It's ChatGPT under the hood, locked into templates.

Verdict: Try it if you already pay. Don't upgrade just for this.

Canva AI

NICE BONUS

Cost: Free with limits, Pro $13/mo

Good for social media captions and quick graphics. Not worth signing up just for this.

Zillow's AI Tools

X SKIP

Bad descriptions, questionable value estimates. Don't let Zillow-generated descriptions be the first thing buyers see.

"AI Real Estate Assistants"

X SKIP (FOR NOW)

Voice bots, website chatbots — $50-500/mo. Overkill for solo agents. Maybe revisit at 50+ transactions/year.

THE HONEST RECOMMENDATION

Start with free ChatGPT or Claude. Use it for 30 days. If you love it and use it daily, consider $20/month for the faster version. **Don't get distracted by shiny new tools. Master one or two, ignore the rest.**

What About AI for Listing Photos?

The question: Can AI fix bad listing photos?

The answer: Sort of, but not well enough to skip hiring a photographer.

Tools like Photoshop AI can remove objects, brighten rooms, even virtually stage spaces. But the results are hit or miss, and if they look fake, you've hurt yourself.

BETTER MOVE

Pay for professional photos. It's $150-300 and it's the best ROI in your entire marketing budget. Don't cheap out here.

CHAPTER 05

Putting It All Together — Your Daily Workflow

You've got the tools. You've got the prompts. Here's how to actually use this every day without it becoming another thing on your to-do list.

The Morning Routine (15 Minutes)

Step 1	**Check your calendar** — What's happening today? Showings, meetings, closings?
Step 2	**Open ChatGPT** — Queue up follow-ups for anyone you met yesterday. Use the templates from Chapter 2. Batch them — 3-4 prompts, all drafts at once.
Step 3	**Review and send** — Personalize each message, then send. Text, email, whatever. 5-10 minutes total.
Step 4	**Prep for meetings** — Got a listing appointment? Use the neighborhood summary prompt from Chapter 3. Two-minute draft, add real numbers.

A Sample Day

7:00 AM	Morning coffee. Open ChatGPT, draft three follow-ups. Edit and send. **Done by 7:15.**
9:00 AM	Listing appointment at 10:30. Pull comps, paste into ChatGPT with comp analysis prompt. Verify numbers, print CMA. Out the door by 9:45.
11:30 AM	Got the listing. Paste details into listing prompt, get description draft. Edit while eating lunch. **MLS input done by 1:00 PM.**
2:00 PM	Showings all afternoon. Phone on silent.
6:30 PM	Three buyers texted with questions. Paste context into ChatGPT, get drafts, personalize, send. **Done in 10 minutes instead of 30.**
7:00 PM	**You're off the clock.** Dinner, TV, whatever. You're not working until 11 PM anymore.

The Compound Effect

Week 1

Save ~5 hours. Feels good.

Month 3

Save 60 hours. Close more deals.

Month 1

Save 20 hours. Take 2 extra listings.

Month 6

Can't imagine going back.

DON'T TRY EVERYTHING AT ONCE

Week 1: Just use AI for listing descriptions. Get comfortable with prompts.

Week 2: Add follow-up drafting to your morning routine.

Week 3: Start using market analysis prompts for seller meetings.

Week 4: You're doing all three, it feels normal, and you're saving 10+ hours a week.

"Consistency beats talent in this business. AI helps you stay consistent."

CLOSING

You've Got This

Here's what you just learned:

- How to write listing descriptions in **5 minutes instead of 45**
- How to draft personalized follow-ups **without staring at a blank screen**
- How to prep for seller meetings with **AI-generated talking points**
- Which tools are worth your time and **which are hype**
- A daily workflow that **actually fits into your life**

This isn't about becoming a tech person. It's about getting your time back.

You didn't get into real estate to spend your evenings writing listing descriptions and your mornings trying to remember who you forgot to text back. You got into this to help people buy and sell homes, make good money, and have a life.

Start small. Pick one workflow. Use it for a week. When it feels normal, add another.

Three months from now, you'll look back and wonder how you ever functioned without this.

Now go sell some houses.
